

Overview:

Curious Business Solutions Private Limited specializes in delivering top-tier web development and design services. We've worked with clients like SOBF (<https://www.sobf.in/>), creating modern, user-friendly websites that align with their mission. After reviewing your college's website, we noticed opportunities for improvement in design and functionality that align with current industry standards.

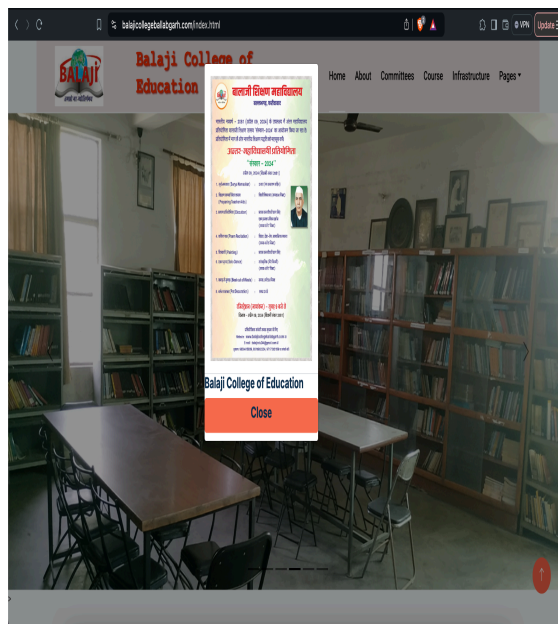

With our expertise in UI/UX psychology and web development, we can revamp your site to enhance your digital presence, attract more prospective students, and effectively showcase your institution's strengths in today's competitive educational landscape. Let's collaborate to create a website that truly stands out.

Areas for Improvement and Suggestions

1. **Popup Overuse Causing Poor UX**

Problem: The popup appears every time the website reloads, leading to poor UX and user frustration, which can discourage repeat visits.

Suggestion: Replace the popup with a permanent component on the homepage to display the information without disrupting the user's experience.

2. Enhancing Visual Communication of Vision, Mission, and Objectives

Problem: The current visual representation of the institute's vision, mission, and objectives is unappealing and fails to convey its foundation of excellence.

Solution: Create a dedicated visual design for the vision, mission, and objectives. Use impactful imagery to enhance appeal and clearly communicate the institute's commitment to excellence.

3. Streamlining the Navigation Bar for Improved User Experience

Problem: The navigation bar is cluttered and heavy, negatively impacting user experience. Its lack of minimalism makes the interface feel overwhelming and unrefined.

Solution: Redesign the navigation bar to be clean, minimalistic, informative. Reduce unnecessary elements, use subtle colors, and create a streamlined structure to enhance visual appeal and navigation efficiency.

4. Addressing Responsiveness and Overflow Issues in Mobile UI

Problem: The current "About Us" page lacks visual engagement, with misaligned text and images, making the layout feel unbalanced.

Solution: Arrange text and images in alternating positions, creating a visually appealing flow while maintaining readability and balance across the page.

5. Addressing Responsiveness and Overflow Issues in Mobile UI

Problem: Lack of clarity and engagement when displaying faculty and management information on the webpage, leading to user confusion.

Solution: Use structured cards to present member photos, names, and designations, improving visual hierarchy and user interaction with the content.

6. **Addressing Responsiveness and Overflow Issues in Mobile UI**

Problem: The mobile UI lacks responsiveness, causing element overflow and disrupting layout. This results in poor readability and accessibility on smaller screens.

Solution: Apply responsive design principles with media queries and flexible layouts like CSS Grid and Flexbox. Adjust text scaling and container sizing to prevent overflow and enhance user experience.

In today's digital landscape, a strong website is vital for attracting and retaining prospective students. Our review of your college's website highlights key improvement areas: user experience, visual communication, and mobile responsiveness. By implementing our tailored solutions, we can enhance your online presence.

At Curious Business Solutions, we are dedicated to creating a website that reflects your institution's values and effectively engages your audience. Let's transform your digital presence together.
